

FOR IMMEDIATE RELEASE

## **Fixstars Launches Rental Service for "AIStation," an All-in-One Environment for Secure and Safe Private AI Use**

*Enabling AI-driven Efficiency for Highly Confidential Operations*

IRVINE, California – June 17, 2025 – Fixstars Corporation (TSE Prime: 3687, US Headquarters: Irvine, CA), a leading company in performance engineering technology, has commenced rental services for "Fixstars AIStation" (hereinafter, AIStation), a private AI utilization workstation that allows secure use of the latest AI in a local environment. This service enables the optimization of highly confidential tasks using high-performance and multi-functional AI, comparable to those offered by major cloud AI service providers like ChatGPT and Claude, all within a local environment.

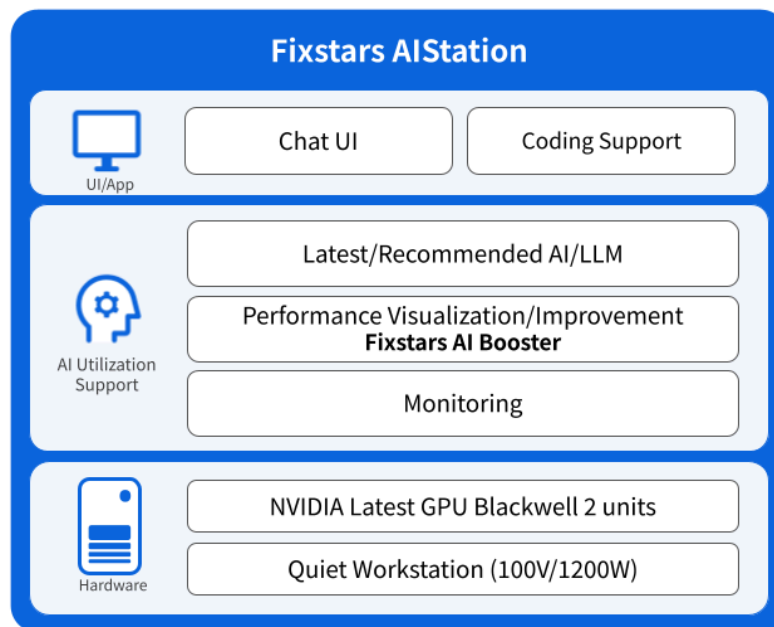

### **Private AI Utilization Workstation "Fixstars AIStation"**

This service delivers the latest AI models and necessary applications for their utilization, pre-built on a high-performance workstation, ready for immediate use in a local environment. The recommended AI models are selected based on Fixstars' performance engineering technology after verifying their operation and performance. Furthermore, AI model operation settings are optimized using Fixstars' performance engineering platform "Fixstars AI Booster"

(hereinafter, AIBooster). As AIBooster itself is pre-installed on this product, users can monitor and improve performance themselves. Additionally, Fixstars will provide updates on AI models and support for their utilization even after implementation.

AIStation Configuration Overview

## Features

### Secure Local AI Environment for Confidential Information

AIStation performs all AI processing in a local environment. Since no data communication outside the company occurs and it can be used in a closed environment, confidential information can be securely referenced, processed, and analyzed. Furthermore, there is no concern that AI usage history or internal intellectual property will be used for training cloud AI models.

### Easy Access to the Latest Models

Not only during the initial setup of AIStation, but also during subsequent AI model additions and updates, users can easily and smoothly set up and start using the latest AI through Fixstars' proprietary update management system. Moving forward, Fixstars will promptly verify newly announced AI models and provide updates. Additionally, experienced Fixstars engineers will provide operational support for any issues encountered during use and guidance on how to utilize AI.

## Building an AI Environment Tailored to Your Business Operations

AIStation can run multiple AI models. A single unit can be used to switch between models specialized for various tasks such as coding support, document creation/editing, image generation, and image comprehension. Users can also freely add AI models and applications necessary for their specific business operations.

### Main Specifications

Hardware	Equipped with 2 latest GPUs (NVIDIA PRO 6000 Blackwell Series) Can be installed in an office due to standard 100V power supply and high quietness
Software	AI utilization support software included <ul style="list-style-type: none"><li>- Chat UI (Open WebUI)</li><li>- Coding support (Cline, Continue)</li><li>- Performance visualization/improvement (Fixstars AIBooster)</li><li>- Monitoring (Langfuse)</li></ul>
Support	Initial setup Tutorial sessions held Operation support Provision of update distribution for latest models
Price	Rental from 600,000 JPY/month + *May vary depending on contract period and content.
Options	GPU acceleration, Technical support for AI/deep learning , Other consultations welcome.

Details: <https://www.fixstars.com/ja/ai/ai-station>

[1] AIStation uses local LLMs. A local LLM is an LLM (Large Language Model) that can be built in an on-premise environment. It is characterized by excellent privacy and security because it does not require an internet connection and can process data locally.

### Performance Engineering Platform "Fixstars AIBooster"

AIBooster is software aimed at maintaining optimal utilization efficiency of computing resources such as GPUs and consistently high performance. It has a Performance Observability (PO) function that continuously records the usage status of hardware, including GPUs, and software execution profiles over time, and visualizes changes. It also has a Performance Intelligence (PI) function that proposes bottleneck improvements and automates acceleration. Free downloads and online demos of AI Booster are available, so please check them out.
