

## **Notice Regarding InfiniVAN's Execution of a Reseller Agreement with CYBERNETICA, a Provider of e-Government Services**

IPS, Inc. (the "Company") is pleased to announce that its consolidated subsidiary, InfiniVAN, Inc. ("InfiniVAN"), entered into a reseller agreement with CYBERNETICA AS ("CYBERNETICA"), a provider of e-Government services, on September 28, 2026, as outlined below.

### **1. Overview of Reseller Agreement**

CYBERNETICA\* provides its proprietary solutions to government agencies in the Republic of Estonia, a leading ICT nation that has successfully digitalized virtually all public administrative services. The company is recognized globally for designing and implementing advanced e-Government solutions and has established digital systems for government agencies and related organizations based on high security standards. CYBERNETICA has a proven track record of deployments for government agencies, financial institutions, and telecommunications operators, particularly in Europe.

Its solutions support key areas such as taxation and customs information, digital identity, data exchange, and cybersecurity. CYBERNETICA has helped establish the foundation of Estonia's digital society by connecting approximately 1,000 public institutions and private enterprises, enabling more than 3,000 digital services, and processing over 3.7 billion transactions annually.

\*CYBERNETICA AS: <https://cyber.ee/industries/government>

In the Republic of the Philippines, the Department of Information and Communications Technology ("DICT") is promoting the National Broadband Plan to improve digital connectivity throughout the country while advancing the digital transformation of various government agencies. Given ongoing initiatives such as the digitalization of consular services, including passport applications, visa issuance, and authentication of legal documents, as well as system interoperability among government agencies and integration with various applications, the Company believes that demand for ICT solution services from government-related organizations and local government units is expected to grow over the medium to long term.

InfiniVAN is developing digital infrastructure that supports the AI-driven digital economy, including international submarine cable systems, cable landing stations, domestic submarine cable networks, terrestrial backhaul networks, and Internet exchanges. Through these initiatives, InfiniVAN is building a digital network that connects the Philippines with the Asia-Pacific region and supports growing demand for high-capacity communications, particularly from data centers.

While InfiniVAN has long provided digital infrastructure services, including internet connectivity for public facilities and public spaces, dedicated lines, and other telecommunications services to government agencies and local government units, it has also been expanding its ICT solutions business. In June 2024, InfiniVAN entered into a memorandum of understanding (MOU) with Quezon City, the largest municipality in the Philippines, regarding the deployment of an AI-powered data management system, and the delivery of that system has now been completed.

By capturing expanding demand for digital infrastructure and strengthening its ICT solutions offerings, InfiniVAN aims to contribute further to the digital transformation of government-related organizations and local government units throughout the Philippines.

## 2. Outlook

This agreement sets forth the basic terms and conditions under which InfiniVAN may market and sell CYBERNETICA's products and services in the Philippines. At this time, the impact of the execution of this agreement on the Company's consolidated financial results is expected to be immaterial. Should any matters requiring disclosure arise in the future, the Company will promptly make the necessary announcement.
